nimo[®]

Nimo ® Electronic Single Breast Pump is designed to be ergonomic and easy to use.

It has two different suction modes, bionic rhythm and classical fixed rhythm, which imitate the baby's suction rhythms. The device starts operating in low-level mode, helping to initiate the mother's milk flow. With the 4-stage suction level of both modes, the mother can choose the most appropriate rhythm for milking.

Thanks to the LED indicators, it can be easily seen which suction mode and which suction power it is in.

Not only with electric power but also it can be used with 4 AA batteries. For this reason it can be also use on travel or places where there is no electricity.
